About Me

Driven B.Tech student and full-stack developer with a track record of architecting memory-optimized mobile apps, interactive WebGL interfaces, and hardware-integrated IoT systems. Passionate about continuous learning, I focus on strengthening programming fundamentals by building and iterating on complex, real-world solutions.

Skills & Achievements

- **Languages:** Python, Java, C/C++, HTML5, CSS3, JavaScript, Kotlin, Dart
- **Frameworks & Libraries:** Flutter, Flask, GSAP, Jinja2
- **Databases:** MySQL, SQLAlchemy, SQLite
- **Design & Modeling:** AutoCAD, Blender, Adobe Photoshop
- **Core Concepts & Tools:** Object-Oriented Programming (OOP), Data Structures & Algorithms, Git, GitHub
- **Achievements:** JISTech 2K26: 1st place - App-Dev Competition, 2nd Runner-Up - Theme Based Project (AES)

Projects

Maargdarshan | AI-Enabled Smart Navigation Ecosystem

[Team Project - Solo Architect & Lead Developer]

C/C++, Flutter, Kotlin, Python, JavaScript, Dart, ESP32, Arduino

Architecture: Three-Tier Ecosystem

- **Hardware Node:** Engineered a custom wearable IoT device integrating a multidirectional spatial awareness array for real-time environmental mapping and localized haptic response.
- **Web Backend:** Architected a low-latency web portal featuring a digital twin interface to visually track hardware orientation, integrated with real-time optical telemetry, historical spatial-analysis logs alongside emergency dispatch protocol.
- **Frontend & UI Engineering:** Engineered a high-performance, visually thematic UI utilizing advanced rendering techniques to achieve fluid physics (satin cloth and water ripple effects). Integrated dynamic thematic motifs (peacock feather cursor) to visually translate the project's assistive philosophy into an interactive digital experience.
- **Mobile Application:** Developed a memory-optimized native app in a headless ambient state, seamlessly unifying voice-navigated spatial AI, optical telemetry, and spatial-analysis logs with an OS-bypassing emergency routing protocol.

Super Wheels | High-Performance Automotive UI/UX [Solo Project]

HTML5, CSS3, JS, GSAP

- Developed a high-fidelity interactive landing page prototype utilizing native web technologies without relying on heavy frontend frameworks.
- Designed complex GSAP scroll-triggered animations, physics-based CSS hover states, and a custom JavaScript dual-audio controller for synchronized multimedia playback.

Udyog | AI-Driven Industrial Supply & Waste Exchange

SQLAlchemy, Flask, Python, SQLite

[Duo Project - Lead Developer & Designer] (Under Development)

- Architected a full-stack B2B marketplace featuring a Circular Economy module, enabling factories to seamlessly purchase raw materials and list manufacturing by-products as secondary resources.
- Engineered an AI recommendation engine utilizing geospatial proximity and sentiment analysis to optimize supply chain discovery, backed by dynamic SQLite queries for complex material filtering.
- Implemented an industrial compliance layer with digital certificate verification and a bespoke multi-tag rating system to establish B2B trust via actionable engineering metrics.

Technical Practice & Implementation

Data Structures and Algorithm Practice

Ongoing

- Building custom implementations of Arrays, Linked Lists, and sorting algorithms.
- Solving algorithmic challenges to strengthen problem-solving and computational thinking.
- Utilizing Git for version control and documenting progress on GitHub.

Education

B.Tech in Computer Science and Engineering (2025-2029)

JIS College of Engineering, Kalyani

Pursuing

Interests

- Participating in hackathons and tech events
- Full-stack web and mobile development
- Building hardware and sensor-based projects connected to web interfaces
